## 1. Factor Analysis

The factor analysis in SPSS is done to describe the variability in the data collected for the observed analysis. This analysis helped the researcher in reducing larger variables into potentially lower variables. It also helped in ensuring the reduction of large data sets into evaluation for reflecting the variations in unobserved variables. The following tables are observed from the SPSS for factor analysis:

## Communalities

|  | Initial |
| :---: | :---: |
| JI1. I am involved in decisions that affect my work | 1.000 |
| JI1. I have enough information to do my job well | 1.000 |
| JI2. I get the most satisfaction in life from my job | 1.000 |
| JI2. My job to me is no different from eating, drinking or breathing | 1.000 |
| JI3. My work group focuses on fixing the problem rather than finding someone to blame | 1.000 |
| OC1. I am really content with working in this company instead of other company | 1.000 |
| OC1. I am proud to tell people that I am part of this company | 1.000 |
| OC2. I can comfortably tell people that my company is a great place to work in | 1.000 |
| OC2. I am of the opinion that this company is the best of the other possible companies to work in | 1.000 |
| OC3. I do care about the future of the company | 1.000 |
| OC4. I would accept to undertake any responsibility to go on working in the company | 1.000 |
| OC4. The company I am working in has motivated me in the best way possible in terms of job performance | 1.000 |
| OC5. I can see that my values are very similar to those of the company | 1.000 |

| OC6. I am willing to make more efforts than normally expected of me to contribute <br> to the success of the company | 1.000 |
| :--- | :---: |
| EP2. I take complete responsibility of the quality of my work | 1.000 |
| EP3. I am usually preoccupied with the following day's work | 1.000 |
| EP4. I prefer to arrive office on time and when there are things to do, I leave home |  |
| earlier to go to work | 1.000 |
| EP5. I would avoid undertaking extra duties and responsibilities related with my job | 1.000 |

Extraction Method: Principal Component Analysis.

Total Variance Explained

| Component | Total |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | \% of Variance | Cunilativy $\%$ | tal | \% of Variance | Cumulative \% |
| 1 | 5.893 | $32.741$ | TIE $\mathrm{3}_{2.741}$ | 4.445 | 24.696 | 24.696 |
| 2 | 3.104 | 17.243 | 49.984 | 2.677 | 14.871 | 39.567 |
| 3 | 1.751 | 9.726 | 59.710 | 2.199 | 12.216 | 51.784 |
| 4 | 1.325 | 7.359 | 67.069 | 2.004 | 11.136 | 62.920 |
| 5 | 1.086 | 6.033 | 73.102 | 1.693 | 9.405 | 72.325 |
| 6 | 1.012 | 5.620 | 78.721 | 1.151 | 6.397 | 78.721 |
| 7 | . 849 | 4.719 | 83.440 |  |  |  |
| 8 | . 624 | 3.467 | 86.906 |  |  |  |
| 9 | . 578 | 3.210 | 90.116 |  |  |  |
| 10 | . 445 | 2.472 | 92.588 |  |  |  |
| 11 | . 364 | 2.021 | 94.609 |  |  |  |
| 12 | . 294 | 1.635 | 96.244 |  |  |  |
| 13 | . 255 | 1.418 | 97.662 |  |  |  |
| 14 | . 151 | . 839 | 98.501 |  |  |  |
| 15 | . 105 | . 585 | 99.087 |  |  |  |
| 16 | . 093 | . 514 | 99.600 |  |  |  |
| 17 | . 043 | . 240 | 99.841 |  |  |  |
| 18 | . 029 | . 159 | 100.000 |  |  |  |

Extraction Method: Principal Component Analysis.

The extraction method has helped in principal component analysis to determine the values of communalities as 1 for each of the statements. The results have shown that rotation sum of squared loadings mark to a cumulative of $78.721 \%$. The screeplot has marked the decrease of eigen value from max 6 to as low as 0 .

| EP5. I would avoid undertaking extra duties and responsibilities related with my job | -. 001 | -. 084 | -. 008 | . 104 | -. 032 | . 961 |

Extraction Method: Principal Component Analysis.
Rotation Method: Varimax with Kaiser Normalization.

The use of effective measures has been helpful for keeping the confinement of the operational development. The critical identification is marked with the composite procession and management of activities. The extraction and rotation method is used for the identification of the data reduction. The creative control and development of the measures is evaluated for ensuring the concise management operations.

## 2. ANOVA Test

The ANOVA test is done with the concept to identify and develop the critical identification of the operations. The ANOVA is helpful for the identification of the values of data with $95 \%$ significance, F value, and mean error. The ANOVA test can be helpful for the respective analysis and development of the means. The test value has helped in keeping the control of the measures for enabling the prospect and development means. The following tables are obtained from the ANOVA testing,

|  |  | N | Mean | Std. <br> Deviation | Std. <br> Error | 95\% <br> Interval <br> Lower <br> Bound | fidence <br> or Mean <br> Upper <br> Bound | Minimum | Maximum |

|  | Total | 243.925 | 213 |  |  |  |

The outcomes of the ANOVA analysis are dependent on the descriptive analysis based on monthly income criteria which shows that,
JI1 has df value of 4 , mean square value of $0.853, \mathrm{~F}$ value of 3.538 , and significance value of 0.008 , which states that this relation is significant.

JI2 has df value of 4, mean square value of 4.076, F value of 3.666, and significance value of 0.006 , which states that this relation is significant.

OC1 has df value of 4 , mean square value of $3,599, F$ value of 3.581 , and significance value of 0.007 , which states that this relation is significant.

OC2 has df value of 4 , mean square value of $2.270, \mathrm{~F}$ value of 3.328 , and significance value of 0.011 , which states that this relation is significant.
OC6 has df value of 4 , mean square value of 1.605 F value of 3.241 , and significance value of 0.013 , which states that this relation is significant.

EP2 has df value of 2, mean square value of $3.890, \mathrm{~F}$ value of 5.113, and significance value of 0.007 , which states that this relation is significant.
EP4 has df value of 2, mean square value of 5.857, F value of 5.733, and significance value of 0.004 , which states that this relation is significant.
Rest of the relations are not significant.

## 3. Regression Analysis

Multiple linear regression is developed for the identifying the linear relation of predictor with the dependent variable. The outcome is identified using line of equation, which is identified from the coefficient table. The critical identification of the data in the regression model is developed with the effective analysis of the measures in developing operational development. The analysis of measures of operational use of develinent. The regression analysis is marked with the operational key for enabling the identification of the relation between the dependent variables and independent variables as shown below,

| Coefficients ${ }^{\text {a }}$ |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Model |  | Unstandardized Coefficients |  | Standardized Coefficients <br> Beta |  |  | 95.0\% Confidence Interval for B |  | Correlations |  |  |

a. Dependent Variable: JI2. I get the most satisfaction in life from my job

Putting values in the $\mathrm{Y}=\mathrm{A}+\mathrm{Bx} 1+\mathrm{Cx} 2+\mathrm{Dx} 3 \ldots \ldots$. Equation, from the table of Unstandardized Coefficients,

JI2. Job Satisfaction $=-1.686-0.197 *(\mathrm{OC} 1)-0.457 *\left(\mathrm{OC} 1 \_1\right)+0.596 *(\mathrm{OC} 2)+0.255 *$ (OC2_1) + 0.156* (OC3) + 0.036* (OC4) + 0.401* (OC4_1) + 0.082* (OC5) + 0.427* (OC6)

The outcomes for significance (highlighted in the table above) and regression outcomes have been helpful for the creative use of the relation between dependent and independent variable. The respective plan of work is listed for ensuring the ereative role in keeping the satisfaction in life from the job. The completion of the readraitipin identifying the relation between organisation commitment and employee performance over the job involvement and organisational performance as mentioned in the research objectives.
